

PROFESSIONAL CERTIFICATE PROGRAM

MUSIC PRODUCTION & FILM SCORING.

12-WEEK STUDIO-BASED CERTIFICATE PROGRAM

EDUCATE • EMPOWER • ELEVATE

DURATION

12 Weeks / 3 Months

FORMAT

Studio-Based, Cohort-Led

LOCATION

Maduravoyal, Chennai

ENQUIRIES

theaudiohubofficial@gmail.com

PROGRAM OVERVIEW

A studio-built path from **first session** to final delivery

The Professional Certificate Program in Music Production & Film Scoring is a 12-week, hands-on training program built around real studio sessions rather than lecture theory. Students move from DAW fundamentals through MIDI programming, rhythm, arrangement and composition into Indian instrument integration, film scoring, sound design, mixing and professional project delivery. It's the same signal path a working composer or mix engineer follows on a live brief.

Professional-grade plug-in and analog-inspired processing tools run through the curriculum wherever a real workflow calls for them: the console-style approach to gain staging in Week 1, the EQ and compression fundamentals in Week 9, the creative sound-design processing in Week 10. Students graduate fluent in an industry-standard production workflow, not just familiar with a single add-on module.

PROGRAM OBJECTIVES

**OBJ. 01****DAW & Session Confidence**

Build fluency in professional DAW operation, session management and signal flow.

**OBJ. 02****Programming & Arrangement**

Develop practical MIDI programming, beat creation, sound selection and arrangement craft.

**OBJ. 03****Emotion & Narrative**

Compose music that communicates mood and supports visual storytelling.

**OBJ. 04****Indian Instrumentation**

Integrate traditional Indian instrumentation with contemporary production techniques.

**OBJ. 05****Film Scoring & Sound Design**

Introduce practical scoring, background-score and sound-design workflows for visual media.

**OBJ. 06****Professional Mixing**

Develop mixing skills through hands-on EQ, compression, reverb, delay and analog-inspired plug-in workflows.

THE RACK

Twelve weeks, one signal chain

01	Setup & DAW Confidence	
02	MIDI & Sound Selection	
03	Rhythm & Groove	
04	Arrangement Basics	
05	Emotion in Music	
06	Indian Instrument Integration & AI	
07	Film Scoring Basics	
08	Advanced BGM Techniques	
09	Mixing, Practical Session	
10	Sound Design, Textures & Creative Processing	
11	Professional Industry Workflow	
12	Final Project, Track or Film Score	

BAR LENGTH = STUDIO INTENSITY FOR THE WEEK

WEEKS 01 - 03

Foundations: Studio, MIDI & Rhythm

CH.01 · SETUP & DAW CONFIDENCE

Building the production environment

- DAW navigation & audio interface setup
- Audio and MIDI track fundamentals
- Creating and organizing sessions
- Signal flow and gain structure

PRACTICAL Create, configure and organize a basic production session.

CH.02 · MIDI & SOUND SELECTION

Programming melody and choosing sound

- MIDI programming, velocity & quantization
- Basic humanization techniques
- Working with virtual instruments
- Sound libraries, presets & layering

PRACTICAL Create a melody using MIDI and virtual instruments.

ASSESSMENT MELODY CREATION

CH.03 · RHYTHM & GROOVE

Beat programming and sample craft

- Beat, drum & percussion programming
- Groove, velocity & timing variation
- Sample libraries, incl. Splice
- Layering drums and percussion

PRACTICAL Create a complete rhythmic section for a music production.

WEEKS 04 - 06

Craft & Emotion: Arrangement, Mood & Indian Instrumentation

CH.04 · ARRANGEMENT BASICS

Structuring a complete production

- Song structure: intro, verse, chorus, drop, bridge, outro
- Layering sounds & instruments
- Building and reducing energy, transitions
- Automation across an arrangement

PRACTICAL Arrange a musical idea into a structured production.

ASSESSMENT FULL TRACK PRODUCTION

CH.05 · EMOTION IN MUSIC

Composing to mood and narrative

- Major vs. minor tonality
- Composing sad and romantic/love themes
- Instrument choice by emotional register
- Translating visual references into music

PRACTICAL Compose an original theme based on a provided visual/film reference.

CH.06 · INDIAN INSTRUMENT INTEGRATION + AI

Tradition meets contemporary production

- Flute, Nadaswaram & Indian percussion
- Layering acoustic & virtual instruments
- Processing Indian instruments in a modern mix
- AI-assisted instrument & texture creation

PRACTICAL Create a modern production incorporating Indian instrumentation and AI-assisted sound creation.

WEEKS 07 - 08

Scoring for Picture: From Spotting Notes to Cinematic Cues

CH.07 · FILM SCORING BASICS

Reading a scene before composing

- Music's role in visual storytelling
- Spotting a scene; start/stop points
- Working with tempo and picture
- Synchronizing music to visual content
- Knowing when to use music, and when to hold back

PRACTICAL Compose and synchronize an original background score to a selected scene.

ASSESSMENT SCENE SCORING

CH.08 · ADVANCED BGM TECHNIQUES

Tension, dynamics and silence

- Layering for scale and cinematic impact
- Building tension & emotional transitions
- Dynamics and silence as creative tools
- Rises, build-ups, impacts
- Balancing music against dialogue
- Developing themes and motifs

PRACTICAL Create an advanced background score demonstrating tension, dynamics, layering and silence.

WHY IT MATTERS

This two-week arc is where students stop reacting to picture and start directing the audience's attention. It's the same judgment call a working scoring engineer makes long before ever touching a compressor.

WEEK 09 · THE MIX SESSION

Practical Mixing

This is the week the curriculum hands students a real console. Practical mixing fundamentals like gain staging, EQ, compression, reverb and delay are taught alongside professional-grade, analog-inspired plug-in processing, so students learn on real sessions instead of a bolt-on demo.

PRACTICAL MIXING

- Session prep, volume balance & panning
- Gain staging and frequency ranges
- Corrective and creative EQ
- Compression & dynamics control
- Reverb, delay and stereo depth

ANALOG-INSPIRED PROCESSING

- Introduction to professional plug-in signal chains
- Analog-inspired processing characteristics
- EQ & compressor character studies
- Applying processing tools in live mix scenarios
- A/B comparison & critical listening

SIGNAL PATH SOURCE → GAIN STAGE → EQ → COMPRESSOR → REVERB/DELAY → PRINT

PRACTICAL Mix a multi-track production using EQ, compression, reverb, delay and professional plug-in processing.

IV

WEEKS 10 - 11

Texture & Delivery: Sound Design and Professional Workflow

CH.10 · SOUND DESIGN, TEXTURES & CREATIVE PROCESSING

Building a custom sonic palette

- Sample manipulation into original sound
- Pads, atmospheres & ambient layers
- Risers, impacts & modulation
- Professional tools for tonal shaping & saturation

PRACTICAL Create an original sound-design palette: pads, textures, risers, impacts and ambient elements.

CREATIVE PROCESSING

CH.11 · PROFESSIONAL INDUSTRY WORKFLOW

Delivering like a working studio

- Session organization & naming conventions
- Consolidating files & preparing stems
- Delivery for mixing, mastering & visual media
- Backup, archiving & collaboration-ready sessions

PRACTICAL Prepare and deliver a professionally organized production session.

TRAINING METHODOLOGY

01 CONCEPT

explanation

02 DEMO

live instructor-led

03 PRACTICE

supervised studio

04 ASSIGNMENT

applied delivery

V WEEK 12 Final Project: Portfolio-Ready Delivery

OPTION A

Full Music Track

Concept through arrangement, production, mixing and final delivery of one original track.

OPTION B

Film Background Score

Compose, produce, synchronize and mix one original score for a selected visual scene.

Where appropriate, students incorporate professional-grade plug-in and analog-inspired processing tools into their production and mixing workflow. Final projects are reviewed on creativity, production quality, technical execution, arrangement, sound selection, mixing and overall presentation.

ASSESSMENT FRAMEWORK

WEEK 02	Melody Creation
WEEK 04	Full Track Production
WEEK 07	Scene Scoring
WEEK 12	Final Music Production or Film Background Score

Student development is also evaluated through weekly practical exercises and studio-session participation.

GRADUATE LEARNING OUTCOMES

What a graduate can **walk into a session and do**

- Operate and organize a modern DAW production workflow
- Program MIDI, select sounds, build rhythmic arrangements
- Compose to mood, emotion and narrative
- Integrate Indian instrumentation into modern productions
- Explore AI-assisted tools in a creative workflow
- Spot and score scenes for film and visual content
- Apply tension, dynamics and silence in advanced BGM
- Apply EQ, compression, reverb and delay in a real mix
- Work fluently with professional plug-ins and analog-inspired processing
- Create original textures, atmospheres, risers and impacts
- Deliver projects to professional file-management standards
- Complete an original track or score, concept to final delivery

EDUCATE • EMPOWER • ELEVATE

Crafting Sound. Creating Impact.
